The new switch must be fitted in the first available button location seen from the steering wheel.

Note!

The illustrations show a left-hand drive car.

Hint

In the cases where the switch shall be located furthest out in the button row, first remove the closest adjacent dummy to avoid damaging the centre console panel:

Remove the penultimate dummy button in the button row by carefully prizing it out using two small screwdrivers as illustrated.

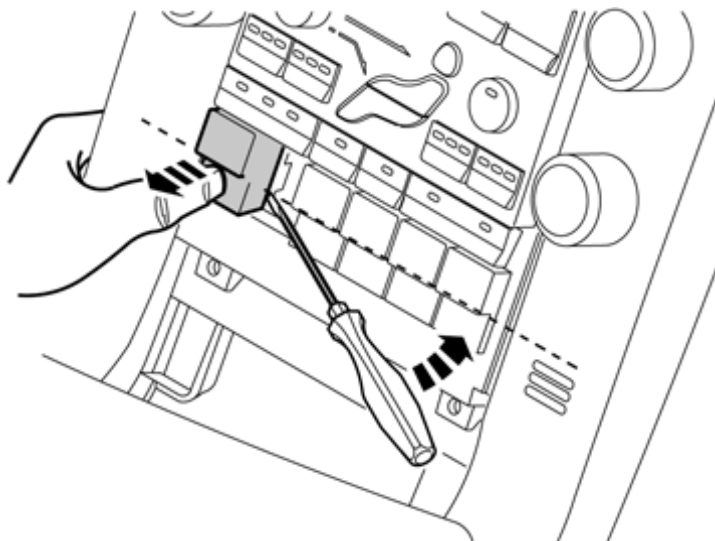

Note!

Always prize against the surfaces that are subsequently covered by the gear selector lever panel (under the dotted line).
